Ziverdo Kit Contains Zinc Acetate 50 mg, Doxycycline 100 mg & Ivermectin 12 mg Dispersible Tablets. It is currently indicated in the first line treatment for COVID-19 positive patients.

Quadruple Therapy with Ivermectin is effective in treating COVID-19

Referring to a pre-official release of a randomised controlled trial using Ivermectin in three doses in primary contacts of COVID-19, It is said that 93 % of primary contacts who received Ivermectin did not develop any symptoms and 58 % of primary contacts who did not receive Ivermectin did progress to have symptoms of the pandemic.
